

About Predii

Predii is an Enterprise AI Software Company based in Palo Alto, CA and Pune, India. Our specialized, validated AI platform has been purpose-built to extract predictive and prescriptive insights from unstructured textual, sensor, and procedural data in the automotive aftermarket and service business. Predii's patented AI engine is currently processing 2+ billion historical repair jobs monthly. Our 8+ years NLP and domain expertise enable industry leading companies such as Snap-on, Epicor, Mercedes-Benz, PepsiCo, and Valvoline to leverage previously unused data to power predictive solutions, increase aftersales revenue, drive product innovation, and support data-driven decision-making strategies.

Predii has been recognized by Gartner, ABI Research, and the Industrial IoT Solutions World Congress for our focus in Applied AI in repair and maintenance.

About this Role: Front-End Developer

As a Front-End Developer, you will be dealing with technologies like JavaScript, ES6/7/8, Angular 8, REST APIs, RxJS, Nginx, and Centos. You will be expected to make test-driven development. You will take the initiative in creating extends and new features from scratch, incl. UX initiatives, Event broadcasting, API communication, and Statefull and Stateless data management. You will also be responsible in making infrastructural decisions in terms of estimating and delivering quarterly goals. As a member of the engineering team, you will be working with cross-functional teams, customers and open source communities. You will have the opportunity to take part in building new industry-changing services in our portfolio.

Bachelor's Degree

2-3 years experience

Competitive Salary

Pune, India / remote

Apply now.

Basic Qualifications

- Bachelor's degree in Computer Science (or equivalent education)
- Experience in developing enterprise software systems
- Familiarity in working with web development technologies (i.e. HTML5, CSS, DOM)
- Fluency with modern JavaScript, TypeScript or similar languages
- Experience working with modern UI frameworks (e.g. React, Angular, Vue, Ember) to build large, single page applications
- Experience in understanding product requirements and developing software architectures & designs to bring them to life
- Proficiency in computer science fundamentals – data structures, algorithms and OO design
- Good understanding of the microservice architecture and design and REST APIs
- Experience building secure, responsive web interfaces that have been successfully delivered to customers

Additional Qualifications

- Good knowledge of conventional and cloud-based infrastructure, and basic networking
- Knowledge of professional software engineering practices and best practices for the full software development life cycle, including coding standards, code reviews, source control management, build processes, testing, and operations
- Ability to take part in a project from scoping requirements through the actual launch of the product
